

Middleware and Integration – Data Sheet

Middleware and Integration

How we can help

1. Integration strategy assessments:

We provide a blueprint to guide your integration agenda, which includes how to get to your desired state architecture, a product fit and technology plan, and an implementation plan with clear milestones to achieve.

2. Implementation services:

Infolob provides a full-fledged implementation of your integration product. We have firm partnerships with MuleSoft, Dell Bhoomi, Informatica, and Oracle to get your integration product in place effectively.

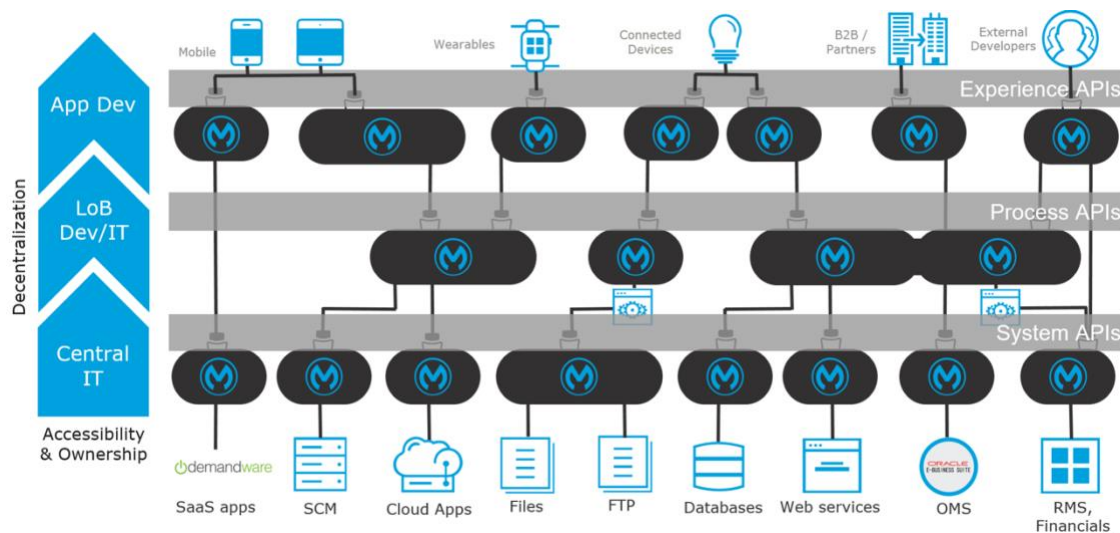

3. Managed services:

For your existing/ongoing integration needs, Infolob provides continuous managed services to avoid any potential pain points and problems.

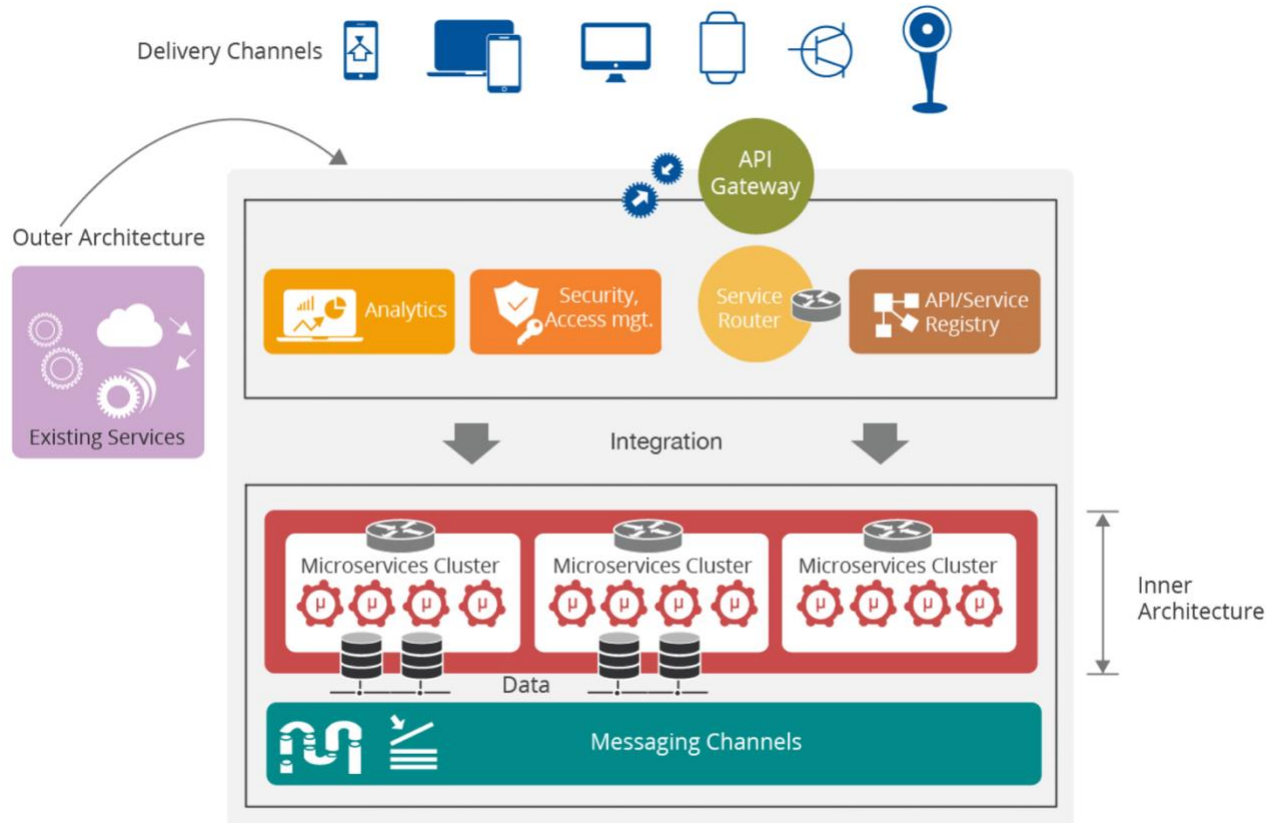

Evolution of Middleware/Integration

With the proliferation of devices and IoT and organizations moving increasingly towards cloud infrastructure, enterprise integration has evolved fundamentally. The data needs have become more sophisticated. Organizations are adding dozens of new business applications regularly to meet the diverse needs of a digital and dynamic business. With this in mind, we truly believe in the strategy of creating an application network to solve the new integration challenge.
