Test Automation – Data Sheet

Test Automation

How we can help

Infolob provides comprehensive test automation services with off-the-shelf and open source test tools.

We can help automate testing across static analysis, unit testing, build acceptance, regression, integration, browser/device, virtualization, data integrity, environment, resiliency, monitoring, usability (UX), accessibility, performance, and non-web functions across these tiers:

● Web UI
● Services
● Data
● Infrastructure
● and more…

About Test Automation

Software testing, particularly regression testing, requires several very repetitive tasks to be executed, and doing them manually is time consuming and difficult. In order to maintain the quality of a system while also updating it to meet business needs, it's important to iron out any rough patches to achieve continuous integration. Automation saves time and money and serves to help identify software defects.
